January 2015 – March 2015

Android based door locking system allows user to open or close door lock
wirelessly using smart phone. Hardware setup was interfaced with smartphone
over bluetooth(HC–05) module & ATMEGA 16 (8 Bit micro controller)

Android application for instantaneous language translation (English – German) —

January 2015 – March 2015

Android application allows user to translate spoken text from English to German
instantaneously. Google and Microsoft translation API were used

SKILLS

Data Structure	●●●●●●●●○○
Java	●●●●●●●●○○
Android	●●●●●●●○○○
C++	●●●●●●○○○○
Node.js	●●●●●●●○○○

Technologies/ Tools

SEO , Google Analytics ,JAVA
Android Development Android
Studio,Node.js , REST api.

Certificates / Achievements

Department level QUIZ winner

Proficient in GERMAN Language (A1
certificate from Goethe Institute)

LANGUAGES

English ,Hindi , German ,Marathi

SPACE (Voice assistant for android device)

Space is a voice assistant or extended service for android device where user and simply launch pop-up window from screen and enter their queries

For eg :

1. user can search for word meaning directly from pop-up window ,no need to explicitly search on browser or dictionary app

2. Can look for translated text directly from the screen.

Mail-train (Simple Email server)

mailtrain is a simple email client application where mailtrain users can exchange emails and messages. SMTP functionality will added and frontend would be Angularised very soon. Backend services are up and running on heroku .

Project is still in development phase therefore entries/data in database are not encrypted , security features will be added soon.

mailtrain is developed on top of node.js and MEAN stack.

fork my project on github : - https://github.com/sjljrvis/Mail-train

mailtrain1.herokuapp.com

Mar 2017 – Present

Mobystore (Simple REST api to manage e-Commerce)

mobystore is a web application that can be used by admin of e Commerce platform to manage different products in database . Services such as view add , update , delete and search functionalities are supported by mobystore . Developers can access mobystore services in REST api

GET , PUT ,POST DELETE request are supported by api endpoints

mobystore is built on top of node.js and MEAN stack

https://github.com/sjljrvis/mobystore
